The invention relates to nucleic acid markers which are overexpressed in cancer cells as compared to their expression in normal (i.e. non-cancerous) ovarian cancer cells. The invention also relates to polypeptides cancerous) ovarian calls. The invention also relates to polypeptides cancerous by the markers, antibodies that selectively bind to the cancerous ovarian cancer involving inhibiting expression of a gene of developing ovarian cancer involving inhibiting expression of a gene of patient afflicted with ovarian cancer comprising providing to cells of the patient an antisense oligonucleotide complementary to a marker of the invention and a method of treating a marker in a markers are useful for assessing if a patient is afflicted with ovarian cancer comprising the level of expression of the invention. The marker is an excert and a normal level of expression of the marker in a patient sample and a normal level of expression of expression levels indicates ovarian cancer. The level of expression of a control non-ovarian cancer sample. A difference between the marker in a patient as of a secreted protein or to a transcribed polymucleotide or its portion. The level of expression of the marker is assessed by detecting the presence in the sample, a protein or protein fragment corresponding to the marker. The presence of protein or protein fragment. Alternatively, the level of expression of the marker is assessed by detecting the presence of a transcribed polymucleotide which anneals with the marker or anneals with a portion of the polymucleotide which anneals with the marker or anneals with a portion of sample at a first point in time, repeating the marker in a subsequent time and comparising the marker in a subsequent time and comparing the level of expression of the marker in a spatient which involves detecting expression. The method at a subsequent time and comparing the level of expression of the marker. The presence of a transcribed out using an ovarian tissue sample or a number of the marker or anneals with a

                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher elacaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABBS777-BBS7272). The sequence data for this patent did not form part of printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                detection reagent for detecting 1000 or more for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                .205 aagaagagaagaggagaaaaaaaaaaaaagaagagaaagaaagaaagaagaaagaaagaaa

(first entry)

12-JUL-2002

This invention describes a novel method for determining the degree of methylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member of oligonacieotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used:

(i) for diagnosis and/or prognosis of side effects of therspeutic drugs

German.

and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc.) particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the method

Determining the degree of cytosine methylation in genomic DNA, useful for diagnosis and prognosis, comprises selective hybridization of amplicons from chemically treated DNA.

Claim 12; 56pp + Sequence Listing; 56pp; German.

This invention describes a novel method for determining the degree of methylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligoners and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used and of a wide range of diseases, e.g. cancer, disorders of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc. particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation of cell or tissue types and for status of many C residues to be determined simultaneously. ABQ14410-ABQ54121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in the the invention

US-09-270-767-8286/c

Sequence 8286, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:

APPLICANT: Homburger et al.

ATILE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster

TILE REFERENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOFWARE: Patentin Ver. 2.0

| Sequence 3 Application US/09510543
| Patent No. 6517837
| GENERAL INFORMATION:
| APPLICANT: Scanlan, Matthew J.
| APPLICANT: Stockert, Elisabeth
| APPLICANT: Chen, Yao-Teeng
| APPLICANT: Old, Lloyd J.
| TITLE OF INVENTION: ISOLATED NUCLEIC ACID MOLECULES ASSOCIATED WITH COLON CANCER AND TITLE OF INVENTION: METHODS FOR DIAGNOSING AND TREATING COLON CANCER ITILE OF INVENTION: METHODS FOR DIAGNOSING AND TREATING COLON CANCER STILLS REFERENCE: LUD-5566.1-05L/NDH
| TITLE OF INVENTION: METHODS FOR DIAGNOSING AND TREATING COLON CANCER STILLS REPERENCE: LUD-5566.1-05L/NDH
| TITLE OF INVENTION: METHODS FOR DIAGNOSING AND TREATING COLON CANCER AND STILLS PRIOR APPLICATION NUMBER: US/09/510,543
| PRIOR APPLICATION NUMBER: US 09/102,322
| PRIOR FILING DATE: 1998-06-22
| NUMBER OF SEQ ID NOS: 22
| SEQ ID NO 3

GENERAL INCORMATION:

GENERAL INCORMATION:

APPLICANT: ABU-THREIDEH, Jane et al

TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC

TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES

TITLE OF INVENTION: THEREOF

FILE REFERENCE: CLOOLO43

CURRENT APPLICATION NUMBER: US/10/207,973

CURRENT FILING DATE: 2002-07-31

NUMBER OF SEQ ID NOS: 3

SOFTWARE: PASESEQ for Windows Version 4.0

SEQ ID NO 9591

                 Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Droscphila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and BST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACC sesource Center can be found at http://bcpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               bp DNA linear GSS 03-JUN-2004 clone:MSMg01-305110.TJ, genomic survey

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and

- Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACS. For further information please see http://www.fruifily.org The BDGP Drosophila melanogaster BAC library was prepared by Kazuctoyo Oscogawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial BCORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pi and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
